

SIP TRUNK SERVICES FROM SHAW BUSINESS SOLUTIONS

THE NEXT LEVEL OF ENTERPRISE COMMUNICATIONS

SIP Trunking combines the transmission of voice, data and other applications in several markets nationwide, without the need for separate circuits for each service. It also allows you to leverage IP data connectivity to run all of your local, long distance, and private voice traffic. Plus, you can extend IP capabilities beyond your enterprise boundaries by seamlessly connecting your IP Communications System to the Public Switch Telephone Network through Shaw Business Solutions' robust MPLS network.

EXPERIENCE THE BENEFITS OF CONVERGED ACCESS

- Gain more flexibility with a converged core network connection for your voice and data services.
- Use any additional bandwidth for other data services, like transferring files, emailing, or providing Internet access.
- Have the security of your own own private, segregated network.

GET SUPERIOR VOICE QUALITY

- Shaw Business Solutions offers G.711 codec, a technology that does not compress the voice packets, leading to the best possible voice quality.
- With a network that is segregated virtually for voice and data service, you'll enjoy a carrier class SIP voice experience.

INCREASE YOUR COST EFFICIENCY

- Be more efficient with dynamically utilized bandwidth. Combining your voice and data traffic can reduce or eliminate the need for multiple circuits, thereby reducing administrative overhead.
- With scalable price bundles, you only pay for what you need.
- Use your existing IP communications equipment* and phones.
- Finally, enjoy competitive long-distance and international rates for calls outside your IP network.

SIP TRUNK SERVICES INCLUDE:

- Unlimited local calling.
- Call Display**.
- Direct Inward Dial (DID) and Direct Outward Dial (DOD) numbers.
- Virtual Inbound Numbers (allowing for a virtual local presence).
